

Open-source AI platform for crypto trading

Engineers get a free, auditable trading terminal with an AI strategy assistant. The exchange pays us 20-50% of commissions from every trade — from day one.

PROBLEM

Retail traders have no single crypto-trading tool that's convenient, free to start, secure, and comes with an AI assistant

Only ~8% of crypto holders trade actively — 92% of exchange users don't.¹ Among them are technically skilled, analytically minded users who need only one thing to start: a convenient, universal tool.

Exchange notation from the pre-computer era

Exchange notation doesn't tap the power of the modern computer and is clumsy to use; professional platforms are overloaded and demand long learning and a developer's skillset.

AI trading tools haven't reached maturity

AI in crypto trading is still a young, emerging category — the niche is open for us to claim our place.

A double barrier: cost & trust

Pay blindly before any result — and hand your API keys to a third-party service.

¹ Coinbase: 115M users, ~9.2M transacting monthly (~8%). Business of Apps; Backlinko.

— SOLUTION

A free, open-source trading terminal with an AI assistant.

Trader HUD

A new approach to visualization, semi-automated and automated trading on crypto exchanges — powerful as a pro tool, yet intuitive, with automation built right into the interface.

Trader Assistant — the trader's co-pilot

Wired into the platform — it sees positions and supervises execution. It **orchestrates the work around the trader**. Tasks and decisions stay with the trader; the assistant runs the rest.

Free and secure

Free to use.

Open-source code you can trust.

API keys stay on your own machine.

No paywall to start — we monetise through exchange commissions.

Open Trader comprehensively solves all the trader's tasks

MVP in active development.

Your keys, always with you: standalone — keys stay on your own machine.

Auto TA markers · Dynamic orders · Catch the Tail · New order types · Order book synced to the chart on the price axis · Cumulative multi-exchange view · Backtesting & genetic optimiser

A \$10.86B market growing to \$17.42B

Our SAM: **technically-minded open-source users** — both those already trading and looking for a better tool, and those who won't start without a clear, convenient one. A second wave follows as the product gains traction.

— COMPETITION

The only trader UI with an AI assistant, earning primarily from exchange fee share

	OPEN TRADER	HUMMINGBOT	OCTOBOT	CRYPTOHOPPER	TRADINGVIEW	FREQTRADE
Open Source	✓	✓	✓	✗	✗	✓
Price to user	Free	Free	Free + \$10-30	\$24-107	\$15-60	Free
Fee share = primary revenue	✓	✓	sub.	2nd	2nd	\$0
Legal structure	Company	Non-profit/DAO	SaaS	SaaS	SaaS	No entity
Visual trading UI (manual + semi-auto)	✓	CLI	bot panel	bot panel	chart	CLI
AI assistant	✓	✗	✓	✓	✗	✓
Zero Trust / local keys	✓	✓	✓	✗	✗	✓
Usable without code	✓	✗	✓	✓	✓	✗

Our edge is the one combination no rival ships: a **trading terminal for manual & semi-automatic trading** — not a bot-runner panel.

WHY TECH-SAVVY TRADERS CHOOSE IT

Visual control of the whole situation + automation they decide on — a deliberate choice.

— BUSINESS MODEL

Revenue from the trader's first trade

Fee share (*revenue*) · **Open Source** (*distribution*).

Fee share (*revenue*) · exchange pays via **API Broker ID** · from the first trade · 20–30%, up to 45–50% with volume
no subscription, no min volume

Open Source (*distribution*) · open, auditable code · **free entry, user trust** · viral funnel, more volume, more fee share

100% of revenue from a 20–50% share of exchange commissions

from the first trade · no subscription, no min volume · snapshot at month 36, our model horizon (the product's early stage)

Our unit is the trade — we earn the full fee on retail tickets

THREE TRADE COHORTS — UNIT = THE TRADE · FULL-FEE RETAIL \$50-\$50K

COHORT	AVG TRADE	REV / TRADE	ARPAU / MO	% FEES
■ \$50-\$500	\$190	\$0.03	~\$7	5%
■ \$500-\$5K	\$2K	\$0.34	~\$47	21%
■ \$5K-\$50K ★	\$19.5K	\$3.31	~\$344	74%
Blended avg	—	—	~\$72	100%

ARPAU = avg trade × trades/mo × **0.017%** full take. Trades/mo: 150 / 120 / 100 · blended **~\$72/mo** across cohort mix. Above \$50K = institutional, excluded.

UNIT = THE TRADE, NOT THE DEPOSIT

Revenue = **trade size × frequency × full fee (0.017%)**. We monetize the **\$50-\$50K full-fee retail ticket (base fee tier)**. The top cohort **\$5K-\$50K is ~10% of trades but ~74% of fees** — on perp, leverage lifts a retail deposit's notional there, still at full fee. Above \$50K = institutional, off-ICP.

ARR AT M36, \$M (16K ACTIVE TRADERS)

The limit is attention, not deposit amount

Volume concentrates where deposits are larger — **big accounts already run automation.**

Retail doesn't: no convenient, affordable tool exists for them.

OUR FEES VS TRADE VOLUME ACROSS TRADE SIZE · 8-EXCHANGE BLEND, SPOT:PERP 12:88

Open Trader fills that gap.

Trade-size distribution — volume & fees from research \$4, \$6; modeled.

Every iteration ships a working product

0-6 MO

Iter 1 · Full product + Open Source

- Trader Data + Trader Engine
- Trader HUD
- Trader Strateg + Trader Sandbox
- Trader Assistant + Local LLM
- Open-source launch
- First exchange connections — Bybit, OKX, Binance
- Company formation — Kyrgyzstan (LLC + High-Tech Park)

7-12 MO

Iter 2 · Expansion

- Multi-exchange connectivity
- Broker ID — first exchanges (Bybit, OKX, Binance)
- First revenue
- Mobile client ready
- GTM — Telegram/X, YouTube EN, PR (Decrypt, Forklog), IBW Istanbul, NBX Warsaw
- Holding — Cayman/Singapore + Kyrgyzstan (operating), before Seed
- **Seed closed — mo 12**

13-36 MO · TO SERIES A

Iter 3 · Scaling

- Broker Master — from mo 19
- Team hiring
- Scale-up marketing
- US market entry · LatAm, SEA
- Break-even mo 22 · cash-flow positive mo 24
- Apps in all stores
- **Series A raise — mo 30**

GO-TO-MARKET — ORGANIC-LED, NO PAID RETAIL ADS · MARKETING ~0.5% OF REVENUE

- **Open Source** — GitHub, HN, Reddit → viral, organic reach
- **SEO / content** — compounding organic search
- **Exchange partnerships** — Broker-ID co-marketing
- **Conferences** — iFX Dubai, IBW Istanbul
- **Crypto media** — Decrypt, CoinDesk, Forklog
- **Retention** — M3 (90-day) 40-50%

AI-centric operating model

One senior per vertical + AI assistants. Each hire delivers ~3-5× a classic role — low burn, full ownership, no coordination overhead.

ANNA & ALEKSEY TIKHVINSKY — CO-FOUNDERS AND A FAMILY

One household, one mission. We're on fire with the idea and discuss it round the clock.

Aleksey Tikhvinsky

CEO · CTO · AI Dev — covers 100% of MVP

- Technology visionary
- 25+ years in software engineering
- 15+ years in startups
- 5+ years in blockchains
- Areas of interest: blockchain, cryptography, game theory, exchange trading

Anna Tikhvinskaya

Co-founder, Investor Relations

Full-time: investor docs, outreach, due-diligence support.

Background: professional musician & project founder — transferable patron outreach & end-to-end project ownership.

Raising \$110,000 — Seed target month 12 (12-month runway)

The MVP ships by month 6-7. The runway funds what comes next — building traction, investor outreach and closing the Seed round by month 12 — not building the product. Extension note (up to \$100K) covers any slip.

USE OF FUNDS

INSTRUMENT	ASK	CAP	DISCOUNT	EQUITY
SAFE (Post-Money)	\$110 000	\$1.1M	20%	~10%

PATH & BREAK-EVEN

Operational break-even — mo 22 · cash-flow positive — mo 24. Seed closes by mo 12 (0 funding gap). Extension option: up to \$100K note. Jurisdiction: Kyrgyzstan HTP → Cayman/Singapore before Seed.

Fee-share dependence

3 exchanges in parallel · Broker ID + Broker Master tiers

Crypto winter

Fee share follows volatility, not direction; shorts + grid

Regulatory

Non-custodial; KYC on the exchange; HTP → Cayman/SG
